

Igor Trefilov

AI & Blockchain builder who ships

remote · i@sigma.club · github.com/krilan · x.com/trefeelove · leverbrain.com

SKILLS

EXPERT

AI Automation (Voice AI, LLMs, RAG), TypeScript, React, Product Strategy, DeFi/Blockchain, Remote Leadership

AI/ML STACK

OpenAI, Claude, Gemini APIs, Whisper, ElevenLabs, OpenRouter, Custom RAG Pipelines, Agentic Engineering

LANGUAGES

English (Fluent), Russian (Native)

PROFICIENT

Python, Solidity, Node.js, Next.js, Supabase, n8n/Make.com, LangChain, OpenAI/Claude/Gemini APIs, Web3.js/Ethers.js

BLOCKCHAIN

DeFi Protocols (Pendle, EigenLayer, NFTX), Smart Contracts (OpenZeppelin), NFTs (ERC-721, Metaplex)

REMOTE

8+ Years Remote Work, Async Communication, 0→1 Product Building, Rapid Prototyping

EXPERIENCE

LeverBrain, Remote -- Founder & CEO

Jan 2024 -- Present

- Pivoted LeverBrain into a decentralized high-fidelity marketplace for artificial intelligence (AI) agent skills and modular deployment blueprints.
- **Solana Smart Contracts (Anchor/Rust)**: Designed and deployed the on-chain licensing registry and purchase access ledger, settling microtransactions in USD Coin (USDC) using the Solana Program Library (SPL) Token program.
- **Cryptographic Access Control**: Engineered secure backend file delivery in Convex by validating Web3 wallet signatures and querying on-chain receipt Program Derived Addresses (PDAs) via Helius remote procedure call (RPC) nodes.
- **Real-time Architecture (Convex)**: Built low-latency capability card rendering and metadata caching using Convex (DB & Edge Functions) and Convex File Storage, achieving sub-50ms render times.
- **Operator Experience**: Developed a command-line interface (CLI) and Next.js 15 web application using a tactical glassmorphism visual design system to deliver live previews of agent payloads.
- Tech stack: Next.js 15, TypeScript, Solana (Web3.js, Anchor, SPL Token), Helius RPC, Convex (Real-time DB & File Storage), Tailwind CSS, Framer Motion.

Sigma Club, Remote -- Founder & Product Lead

Jun 2023 -- Present

- Designed and launched an AI-powered collaborative learning platform designed to foster personalized growth paths within communities.
- Architected three core AI features—personalized learning paths, interest-based matching algorithms, and knowledge gap analysis pipelines—resulting in a 40% increase in user session retention.
- Implemented the full-stack codebase using React, TypeScript, and Supabase, integrating Google Gemini and Anthropic Claude APIs to ship the initial minimum viable product (MVP) in under 4 weeks.
- Utilized modern developer tools and prompt engineering to accelerate the development lifecycle by 3x.

DeFi/Web3 Consulting, Remote -- Blockchain Specialist & DeFi Strategist

Jan 2019 -- Present

- Conducted deep protocol analysis and yield strategy execution in decentralized finance (DeFi), leading smart contract security audits and non-fungible token (NFT) launches.
- Generated **\$50k+ in profit within 7 days** by architecting and executing the day-one launch of a custom NFT collection on the FTX marketplace.
- Designed and deployed custom yield strategies across Pendle Finance, EigenLayer restaking protocols, and NFTX liquidity pools, managing a private asset portfolio.
- Authored and deployed audited Ethereum smart contracts using Solidity and OpenZeppelin frameworks, and developed Solana minting protocols following the Metaplex standard.
- Built secure NFT-gated community platforms featuring Web3 wallet authentication, real-time on-chain data fetching, and automated membership verification.

E-commerce Business, Remote -- Founder

Jan 2017 -- Dec 2021

- Founded and scaled a profitable e-commerce store selling specialized digital utility products to Amazon sellers, generating consistent monthly cash flow.
- Directed all operations end-to-end, including digital product design, high-converting marketing funnels, automated customer support pipelines, and vendor relations.
- Maintained profitability for 4 consecutive years, managing a solo operation before executing a strategic acquisition/pivot.

FinTech Platform, Remote -- Product Manager

Mar 2016 -- Nov 2017

- Managed product roadmap and contributed frontend code for a financial technology (FinTech) loan comparison platform serving over 50,000 US consumers.
- Coordinated sprint planning, backlog grooming, and remote team workflows across 3 continents using Agile methodologies.
- Established high-performance remote communication protocols, building a foundation for 8+ years of successful distributed engineering execution.

EDUCATION

Higher School of Economics, Saint-Petersburg, Russia -- Bachelor of Science in Economics

Sep 2012 -- Jun 2016

Focused on quantitative analysis and financial modeling. Deepened in web development and software engineering during studies, pursuing building independent products from zero.
