

Igor Trefilov

AI & Blockchain Systems Architect

github.com/krlan · x.com/trefeelove · i@sigma.club · St. Petersburg, Russia

6yrs building blockchain & DeFi systems

\$50k NFT launch profit in 7 days

50k+ consumers served on FinTech platform

40% user session retention increase

Summary

Self-taught systems architect who builds AI automation pipelines and decentralized protocols from zero. 6+ years of engineering experience across crypto, DeFi, and AI platforms. Strong first-principles execution: bringing complex software concepts to production in weeks, from smart contracts to real-time edge databases.

Experience

2016 - Present · AI agents, on-chain registries, yield strategies

2016 FinTech & E-commerce
Managed financial software roadmaps and scaled digital sales operations.

2019 DeFi & Web3
Conducted protocol audits and designed custom yield restaking vaults.

2023 AI Engineering
Pivoted platforms to voice AI agents, Convex Edge, and Solana programs.

LeverBrain · Decentralized AI skill marketplaceFOUNDER & CEO

ROLEFounded 2024. Designed and deployed an on-chain licensing registry and purchasing access ledger to settle modular AI agent skill payloads.

ACTIONSWrote Solana smart contracts in Anchor/Rust settling microtransactions in USDC; validated wallet signatures and Program Derived Addresses (PDAs) on the edge via Helius RPC nodes; built live capability card rendering in Convex.

IMPACTAchieved sub-50ms render times for skill cards; settled all microtransactions directly on-chain; launched glassmorphism Next.js 15 operator UI.

Sigma Club · AI-powered learning platformFOUNDER & PRODUCT LEAD

ROLEFounded 2023. Engineered an AI-driven collaborative learning portal to foster personalized growth paths and interest matching within online communities.

ACTIONSArchitected matching algorithms, knowledge gap analysis pipelines, and learning plans; integrated Google Gemini and Anthropic Claude APIs using React, TypeScript, and Supabase.

IMPACTDelivered initial minimum viable product (MVP) in under 4 weeks; achieved a 40% increase in user session retention.

DeFi/Web3 Consulting · Protocol audits & yield strategiesBLOCKCHAIN SPECIALIST

ROLEConsulted 2019-Present. Led smart contract audits, custom yield generation, and NFT launches on Ethereum and Solana.

ACTIONSDesigned yield restaking vaults across Pendle Finance, EigenLayer, and NFTX; authored audited Solidity contracts with OpenZeppelin frameworks; built secure wallet-gated community verification.

IMPACTGenerated \$50k+ in profit within 7 days by executing a custom NFT launch on FTX; managed private asset portfolio using audited vault protocols.

First-principles builder. Approach: prototype in public, automate database edge sessions, and write clean CLI tools. Cumulative reach: 320+ stars on GitHub · 4 profitable years in solo e-commerce.

E-commerce Digital	Digital utility store · marketing funnels · solo operator	★ 4 yrs	FinTech Platform	PM & frontend coder · loan comparison engine	★ 50k+ users
solana-convex-boilerplate	TypeScript · wallet access signatures for Convex edge DB	★ 48	anchor-usdc-licensing	Rust/Solana · SPL token purchase registry and receipt PDAs	★ 35

SOLANA

Published an open-source Anchor blueprint for SPL-token licensing programs. The repository was starred by developers and integrated by three early-stage AI agent marketplaces.

Judgment & Conviction

2019	Online restaking vaults	2023	AI Agent Skills pivot	2024	Zero-trust Edge database
	Committed private assets to EigenLayer and Pendle restaking protocols before mainstream adoption. Validated the restaking yield thesis, resulting in double-digit APY.		Recognized that LLMs would evolve from chatbots into autonomous agentic workflows. Shifted focus from simple prompts to developing marketplace blueprints.		Implemented cryptographic signature verification in serverless edge functions over traditional database sessions, reducing transaction verification latencies by 80%.

Public Impact

LeverBrain · leverbrain.com/blog 12k+ unique reads Technical guides on Solana smart contract security and building low-latency edge caching with Convex and Helius.

Selected writing	Invited talks

Core Skills

AI AUTOMATION	Voice AI, RAG pipelines, OpenAI/Claude/Gemini APIs, agentic engineering.
WEB3 & SOLIDITY	Solidity smart contracts, Anchor/Rust, Metaplex, DeFi restaking (Pendle, EigenLayer).
FULL-STACK DEV	TypeScript, React, Next.js 15, Node.js, Convex database, Supabase.
PRODUCT STRATEGY	0→1 MVP delivery in weeks, Agile roadmaps, high-conversion marketing funnels.
REMOTE LEADERSHIP	8+ years distributed async collaboration, command-line developer tooling.

Education

Higher School of Economics · Saint-Petersburg, Russia · Bachelor of Science in Economics · Declined quant finance grad school to build digital businesses. 2012 - 2016
